

PE STRETCH FILM

PLASTICKAR, JULY 2021

PE STRETCH FILM

Stretch Film is the commonly used name for a multi-layered polyethylene film which its main raw material is linear low density polyethylene (LLDPE).

Stretch Film is primarily used to pack and protect products, such as pallets and special items in large sizes. Due to its low thickness and high durability, using stretch film is one of the best and most efficient packaging methods.

If required, the following properties are added to the film:

- **Anti-UV:** to increase resistance to sunlight
- **Anti-Static:** to prevent dust absorption

Product Name	PE Stretch Film
Other Names	Pallet wrap, Manual pallet wrap, Pallet stretch
Grades	<ul style="list-style-type: none"> ▪ Manual wrap ▪ Machine wrap
Application	<ul style="list-style-type: none"> ▪ Manual or machine pallet wrapping ▪ Trash/waste wrapping ▪ Easy wrapping of pallets using light and small rolls ▪ Long protection of loads
Features	<ul style="list-style-type: none"> ▪ Ensures packaging strength for a safer transportation and storage of goods ▪ Enhances security and inventory management ▪ High resistance to perforation with due to the multi-layered structure ▪ High resolution for product inspection ▪ Protection against UV rays ▪ Protection against Slips
Thickness	17 to 50 microns (based on the customer's request)
Width	45 to 150 cm (based on the customer's request)
Length	200 to 6000 m (based on the customer's request)
Color	Transparent (or based on the customer's request)
Pre-Stretch	150 to 350 % (based on the customer's request)
Packaging	Palletized, inner core diameter is 76 mm. Based on the customer's requirement, stretch rolls could be packed in cartons and eventually the cartons would be palletized.
